

**REPLACED BY
ART 34 AMDT**

Claims:

1. A pharmaceutical preparation comprising a lectin to which a protein recoverable from blood, in particular a blood coagulation factor or its recombinant equivalent, is bound in an administration-stable manner.
2. A pharmaceutical preparation according to claim 1, characterized in that the lectin is a plant lectin.
3. A pharmaceutical preparation according to claim 1 or 2, characterized in that the lectin is selected from Concanavalin A, Abrin, Ricin, Phasin or WGA, in particular WGA.
4. A pharmaceutical preparation according to any one of claims 1 to 3, characterized in that the administration-stable bond between lectin and the protein is an acid-labile, covalent bond.
5. A pharmaceutical preparation according to any one of claims 1 to 4, characterized in that the administration-stable bond between lectin and the protein is cleaved by a protease which is specific for target compartments.

6. A pharmaceutical preparation according to any one of claims 1 to 5, characterized in that the lectin is a modified lectin.
7. A pharmaceutical preparation according to any one of claims 1 to 6, characterized in that the lectin is a lectin modified at its target compartment to the drug.
8. A pharmaceutical preparation according to any one of claims 1 to 7, characterized in that the lectin is a lectin modified at its binding site to target compartments.
9. A pharmaceutical preparation according to any one of claims 1 to 8, characterized in that it is confectioned for peroral administration and optionally has a gastric-juice-resistant coating.
10. A pharmaceutical preparation according to any one of claims 1 to 9, characterized in that the lectin is WGA and the protein is linked via an acid-instable cis-aconityl bond.
11. A pharmaceutical preparation according to any one of claims 1 to 10, characterized in that it is provided as a prodrug formulation.
